

Cyber Health Check

How well does your business protect its information and recover from a cyber incident? Answer 65 plain questions and get a rating, every gap, and a roadmap. You don't need to be technical.

What you get

A rating in plain words

One of four ratings, from "Some basics are missing" to "Strong on the areas we asked about", with what each one means.

A roadmap

What to have in place in the first 30 days, 90 days and 12 months, by area, so you know where to start.

Every gap, most important first

Critical, significant and things to improve, with why each matters and what good looks like.

Questions for your IT provider

A ready-made list for the technical questions you weren't sure about, with the evidence to ask for.

How it works

1 Answer plain questions

About 20 minutes. "Not sure" is a useful answer: we flag it so you know what to find out or ask your IT provider.

2 Read your report on screen

It appears straight away, behind a private link that works for 14 days. Print it or save it as a PDF to keep a copy.

3 Act on it

Work through the roadmap, send the list to your IT provider, or ask our consultancy to help. To keep the gaps and track the actions, import them as draft risks into our paid Risk Register.

Developing: some important gaps

1 critical gap, 10 significant gaps and 7 things to improve (18 in all). About 75% of your answers are in place (self-reported).

Area	Answers in place	Rating	Critical gaps
Governance and risk	85%	Green	0
Policies and procedures	81%	Green	0
Accounts and access	69%	Amber	0
Devices and remote work	76%	Amber	0
People and fraud	88%	Green	0
Email, cloud and information	71%	Amber	0
Suppliers and IT provider	79%	Amber	0
Detect, respond and report	75%	Amber	0
Backup and recovery	54%	Amber	1
Risk transfer	100%	Green	0

Part of a sample report, using made-up answers.

Ten areas, in plain words

Governance and risk

Policies and procedures

Accounts and access

Devices and remote work

People and fraud

Email, cloud and information

Suppliers and IT provider

Detect, respond and report

Backup and recovery

Risk transfer (insurance)

What to know before you start

Self-reported

It checks your own answers. Nothing is tested, and it is not an audit.

Private

Reading your result on screen is free, and it isn't emailed. The link works for 14 days, so keep it private and save a copy.

AI is labelled

Where AI helps write the report it is marked. Only your answers and results are sent, never your name or email.

Help if you want it

Our consultancy can check your answers against what is really in place.

Verfapp supports how you manage cyber risk; it does not test your systems, certify anything or give legal advice, and a result is not an assurance that a business is secure. The sample report uses made-up answers.

Take the free Cyber Health Check

About 20 minutes, no payment needed. Want a person to help with the results? Our consultancy can.
